

Here is a highly specific, legally rigorous Mutual Non-Disclosure Agreement (NDA) tailored explicitly for the **Sovereign Shards** architecture.

This version integrates the technical components unique to your framework—such as the **Zero-Inference Router**, the **ToolRegistry orchestration loop**, the **local RAM-isolated execution layers**, and the `.j_chain.json` **state machine protocols**—ensuring your specific intellectual property cannot be reverse-engineered, replicated, or disclosed during corporate or investor evaluations.

MUTUAL NON-DISCLOSURE AGREEMENT

This Mutual Non-Disclosure Agreement (the "Agreement") is entered into as of **June 5, 2026** (the "Effective Date"), by and between **[Your Name / Company Name]**, the principal architect and owner of the **Sovereign Shards** framework ("Disclosing/Receiving Party"), and **[Counterparty Name / Company Name]** ("Receiving/Disclosing Party"). The parties may collectively be referred to as the "Parties" or individually as a "Party."

1. Purpose

The Parties wish to explore a potential business relationship, investment opportunity, corporate rollout, or technical collaboration regarding the **Sovereign Shards** decentralized data fragmentation and localized multi-agent orchestration framework (the "Project"). In connection with this evaluation, the Parties will disclose certain highly proprietary technical, architectural, and business information.

2. Definition of Confidential Information

"Confidential Information" refers to any proprietary information disclosed by one Party (the "Disclosing Party") to the other Party (the "Receiving Party") that is marked as confidential or should reasonably be understood to be confidential given the nature of the information.

Specifically tailored to the **Sovereign Shards Project**, Confidential Information explicitly includes, but is not limited to:

Inference & Routing Architecture: The proprietary designs, logic, source code, and configurations of the **Zero-Inference Router Layer**, the **Deterministic Bypass** mechanisms, and the **ToolRegistry loop** (including `app/agent/tool_registry.py` and dynamic execution handlers) used to intercept command payloads at zero inference cost.

State Machine Protocols: Design schemas, serialization formats, resume-loop logic, and processing parameters handling session persistence and multi-hop task orchestration via `.j_chain.json` structures and execution contexts.

Edge & Environment Compilation: Core initialization scripts, dependency management models, configuration assets (including but not limited to `setup.bat` and `.env` blueprints), and build parameters optimizing isolated local deployments using `llama.cpp` binary builds and quantized hardware targets (e.g., Qwen2.5-Coder profiles).

Data Models & Sovereignty Architecture: Proprietary methods for secure, fileless, **RAM-only runtime execution**, zero-dependency USB-portable packaging, decentralized data partitioning, and local private cluster containerization (Docker/Kubernetes stacks).

Project Repositories & Logs: Internal repository structures, migration logs, source branch tracking records, and developer session histories tracing back through historical code configurations.

3. Obligations of Receiving Party

The Receiving Party agrees to:

Hold all Confidential Information in strict confidence and take reasonable precautions to prevent unauthorized disclosure (applying at least the same degree of care equal to what it uses for its own high-stakes proprietary data).

Use the Confidential Information **solely** for the purpose of evaluating and executing the potential business relationship regarding the Project.

Restrict access to the Confidential Information to its employees, contractors, or advisors who have a definitive "need to know" and who are legally bound by confidentiality obligations no less restrictive than those in this Agreement.

4. Exclusions from Confidential Information

Confidential Information does not include information that:

Is or becomes publicly known through no breach of duty or fault of the Receiving Party.

Was already rightfully in the possession of the Receiving Party prior to disclosure by the Disclosing Party.

Is independently developed by the Receiving Party without reference to or reliance upon the Disclosing Party's Confidential Information.

Is rightfully obtained by the Receiving Party from a third party without restrictions on disclosure.

5. Term and Termination

This Agreement and the obligation to protect Confidential Information shall survive the termination or conclusion of discussions between the Parties for a period of **three (3) years** from the Effective Date, or until such time as the Disclosing Party explicitly releases the Receiving Party from this obligation in writing.

6. Return or Destruction of Materials (RAM Evacuation Clause)

Upon written request by the Disclosing Party, the Receiving Party shall promptly return or, at the Disclosing Party's option, destroy all physical and digital copies, repository clones, configuration logs, and summaries of the Confidential Information.

Because Sovereign Shards utilizes fileless, RAM-only processing layers, the Receiving Party explicitly agrees to completely flush all active volatile memory arrays, local scratchpad directories, and environment caches to ensure no persistent fragments of the framework code or architectural states remain on their local hardware or private nodes.

7. No License or Ownership

Nothing in this Agreement shall be construed to grant the Receiving Party any license, patent, copyright, or ownership rights to the technology, source files, localized models, or structural architectures of the Disclosing Party.

8. Remedies

The Parties acknowledge that any breach or threatened breach of this Agreement may cause immediate and irreparable harm for which monetary damages alone would be inadequate. Accordingly, the Disclosing Party shall be entitled to seek injunctive relief to prevent or stop unauthorized disclosure or code replication, in addition to any other legal remedies available.

9. Governing Law and Jurisdiction

This Agreement shall be governed by and construed in accordance with the laws of the State of **[Insert State, e.g., Delaware]**, without regard to its conflict of law principles. Any legal actions arising under this Agreement must be brought in the courts located in **[Insert City/County, State]**.

10. Miscellaneous

This Agreement constitutes the entire understanding between the Parties regarding the subject matter and supersedes all prior discussions or drafts. It may only be amended or modified by a written document signed by authorized representatives of both Parties.

IN WITNESS WHEREOF, the Parties have executed this Mutual Non-Disclosure Agreement as of the Effective Date.
